Road blocks are being used successfully to reduce the number of accidents associated with the Congress of cars off the road and overturning or collision with obstacles, the visual orientation of drivers, especially at night, as well as the repair or construction of airport pavements and parks and demarcation movement in the car markets, etc.

One of the major advantage is that the collision of a vehicle with a column of water-filled road blocks, it pushed for some distance, protecting from injury and the driver and passengers, and, thus, prevents any damage the car.

These products are produced by polyethylene, resistant to solar UV radiation and temperature extremes from -40oC to +60oC. Available in two basic colors: pure white and deep red.
